

BIGMSGBOX

Simple Messaging Solutions

API DOCUMENTATION

AN INTEGRATION GUIDE FOR SOFTWARE DEVELOPERS

A PRODUCT BY SKYCODE SOLUTIONS
EMAIL: SUPPORT@SKYCODEONLINE.COM

1.0 Introduction

The BigMsgBox API allows you to integrate with us over HTTP. The sole endpoint currently available is the bulk SMS endpoint.

The base URL for the API is **https://api.bigmsgbox.com/{resource}**. Where {resource} represents the resource you want to access. All calls to the API require your API key and secret.

To create the API key and API secret, click on 'API Settings' from the drop-down under your account name. This should be at the top right corner of your screen if you are using a desktop or laptop computer.

2.0 Resources

The available resources are account and sms resources.

2.1 Account Resource

The account resource allows you to retrieve account balance.

Title	Description
Info	This endpoint allows you to retrieve your account balance
Endpoint	https://api.bigmsgbox.com /account/balance
Querystring	Apikey: API key for account Apisecret: API secret for account
Method	GET

Example:

https://api.bigmsgbox.com/account/balance?apikey=my_api_key&apisecret=my_api_secret

2.2 Bulk SMS Resource

The bulk SMS resource allows you to send messages over HTTP to your contacts

Title	Description
Info	This endpoint allows you to send messages.
Endpoint	https://api.bigmsgbox.com/message/send-sms
Querystring	From: Sender address To: Phone number of recipient Message: message to be sent Apikey: API key for account Apisecret: API secret for account
Method	GET

Example:

https://api.bigmsgbox.com/message/send-sms/
?from=bigmsgbox&to=233243458237&message=hello&apikey=my_api_key&apisecret=my_api_secret

Please note that phone number should always be in international format e.g. 233243458237
